BELVO VENTURES GROUP

HR OPERATIONS PORTAL

Software Requirements & Development Brief

INTERNAL USE ONLY

Project type	Internal HR management dashboard
Primary users	HR team only
Employee access	Not required. No employee login or employee-facing portal.
Development approach	Vibe-code a lightweight custom portal; reuse existing tools where practical.
Primary purpose	Centralize HR duties, records, trackers, links, and daily coordination.
Audience	Belvo interns / developers assigned to build the portal
Version	1.0 | 6 November 2026

1. Project Brief

Build a simple, centralized HR Operations Portal for Belvo Ventures Group. The portal is an internal work console for the HR team to manage its responsibilities without juggling separate spreadsheets, scattered folders, manual reminders, and meeting notes.

Important scope decision: This is not a full HRMS. Do not build employee accounts, employee self-service, employee login, payroll, or a large enterprise HR suite. Only authorized HR users should log in and operate the portal.

2. Main Objective

- Bring the HR team's recurring duties into one dashboard.
- Make onboarding, offboarding, leave, attendance, documents, and NDAs easy to track.
- Keep links to the existing Google Drive folders and website assets organized.
- Track intern LinkedIn checks and daily departmental meetings.
- Help HR coordinate requests and follow-ups for the founding team.
- Make the portal quick to build, easy to maintain, and simple to use.

3. User Access & Roles

- **HR Admin:** Full access to all HR modules, records, settings, and reports.
- **HR Team Member (optional):** Access granted by HR Admin. Permissions can be simplified for the MVP.
- **Founders / other employees:** No login required in this version. HR may record actions or requests concerning them internally.

Authentication should be private. Do not publish the portal or its data openly. Use secure login and role-based access if more than one HR user is supported.

4. Required Modules

A. HR Dashboard

- Show quick counts: active interns, onboarding in progress, offboarding in progress, pending documents/NDAs, leave entries, attendance exceptions, and today's meetings.
- Show pending actions and upcoming dates in one prioritized list.
- Provide shortcuts to each module and the relevant Drive folders.
- Include search and date filters where useful.

B. Onboarding Tracker

- Create an onboarding record for each incoming intern/team member.
- Suggested fields: full name, role/department, reporting person, contact details, start date, onboarding status, assigned HR owner, and notes.
- Checklist items should be configurable, for example: details collected, documents received, NDA issued/signed, offer or joining communication completed, access requested, introduction completed, and onboarding marked complete.
- Allow HR to assign an owner, set due dates, add notes, and mark checklist items complete.
- Show statuses such as Not Started, In Progress, Waiting, and Completed.

C. Leave Tracker

- Maintain a centralized leave register for interns/team members.
- Fields: person, department, leave type, from date, to date, number of days, reason (optional), approval/status, recorded by, and remarks.
- Allow HR to add, edit, search, and filter leave entries.
- Provide monthly and individual views, plus CSV/Excel export.

- Do not build employee leave application or approval login workflows in this version. HR records and maintains the tracker.

D. Attendance Tracker

- Maintain a centralized attendance register.
- Fields: person, department, date, attendance status, check-in/check-out if tracked, working arrangement (if relevant), remarks, and updated by.
- Support daily and monthly views, quick status updates, filters, and CSV/Excel export.
- Allow bulk entry or spreadsheet import if practical.
- Keep an edit history for changes to attendance records.

E. Employee Document Drive Register

- Provide a searchable register of employee/intern document folders and files stored in the existing approved Drive.
- Store person, department, document category, Drive folder/file link, upload/received status, date received, expiry/review date if applicable, and remarks.
- Categories may include identity details, education documents, joining documents, certificates, and other HR-approved records.
- Open the relevant Drive folder/file from the portal. Do not attempt to recreate Google Drive storage.
- Restrict sensitive document links and metadata to authorized HR users.

F. NDA Drive Register

- Maintain a separate NDA tracker and quick access to the existing NDA Drive folder.
- Fields: person/company, department or relationship, NDA status, sent date, signed date, file/folder link, responsible HR owner, and follow-up date.
- Statuses: Not Prepared, To Be Sent, Sent, Signed, Pending Follow-up, and Not Applicable.
- Highlight unsigned or overdue NDAs. Allow HR to open the stored NDA file/folder.

G. Website Photo & Asset Update Tracker

- Maintain a list of website sections/pages where team photos or other approved images appear.
- Fields: page/section name, current asset link, replacement asset link, person responsible, requested date, status, and last updated date.
- Allow HR to record when updated photos are collected and passed to the website team.
- Track statuses such as Pending Collection, Ready to Share, Shared with Developer, Updated, and Verified.
- This module is a tracker, not a website CMS. Do not add direct website editing unless separately approved.

H. Offboarding Tracker

- Create an offboarding record when an intern/team member exits.
- Fields: person, department, last working date, reason/category (optional), HR owner, status, and notes.
- Checklist examples: exit communication, handover received, pending work checked, documents/records updated, access removal request sent to relevant admin, NDA/document status checked, and exit marked complete.
- Allow due dates, reminders/flags, notes, and completion status.
- Do not directly disable third-party accounts unless a separately approved integration exists.

I. Intern LinkedIn Check Tracker

- Maintain an intern-wise LinkedIn profile/check register.
- Fields: intern name, LinkedIn profile URL, department, assigned reviewer, last checked date, profile status, feedback/action required, next check date, and notes.
- Allow HR to mark a check as Done, Follow-up Required, or Not Yet Checked.
- Show upcoming checks and pending follow-ups.

- Do not scrape LinkedIn or automate access. HR should review profiles manually and record the outcome.

J. Founding Team Assistance & Request Log

- Provide a simple internal request/task log for HR support requested by the founding team.
- Fields: request title, description, requester, assigned HR owner, priority, due date, status, and completion notes.
- Statuses: New, In Progress, Waiting, and Completed.
- Allow HR to add follow-up notes and view overdue requests.
- Keep this lightweight. It is not intended to replace the company's full CRM or project management system.

K. Daily Departmental Meeting Manager

- Allow HR to create the daily departmental meeting entry with department, date, time, host, attendees, agenda, and meeting link/location.
- Provide a reusable agenda template and a meeting notes/action-items section.
- Record action item, owner, due date, and status.
- Show today's meetings, upcoming meetings, and pending action items.
- HR should be able to mark attendance/participation for internal tracking if required.

5. Suggested Navigation

Dashboard	At-a-glance HR overview and pending actions
People	Onboarding, offboarding, intern records
Trackers	Leave, attendance, LinkedIn checks
Documents	Employee document register and NDA register
Website Assets	Photo and asset update tracker
Coordination	Founding team requests and daily meetings
Reports & Settings	Exports, categories, users, and configuration

6. Common Functional Requirements

- Create, view, edit, archive, search, and filter records in each applicable module.
- Use consistent status labels, date formats, and person/department references across modules.
- Provide CSV export for leave, attendance, onboarding/offboarding, and other useful registers.
- Support attachments or secure Drive links where needed. Prefer linking to existing Drive files over duplicating them.
- Show clear empty states, validation messages, confirmation before deletion, and useful error messages.
- Use a responsive layout that works on laptop and mobile browsers.
- Add created/updated timestamps and the HR user responsible for important changes.

7. Security & Privacy

- HR-only sign-in. No public access and no employee self-service accounts.
- Use secure authentication and protect session credentials.
- Store the minimum personal information required for HR operations.
- Restrict access to sensitive document/NDA links. Never expose private Drive links on public pages.
- Do not store passwords, bank details, identity-document numbers, or unnecessary sensitive data in free-text notes.
- Maintain audit history for important edits, especially attendance, leave, document status, and offboarding.

- Use backups and document how data can be restored.

8. Build Priorities

Priority	Build scope
MVP 1	HR login, dashboard, onboarding, leave tracker, attendance tracker.
MVP 2	Document Drive register, NDA register, offboarding tracker.
MVP 3	Website photo tracker, LinkedIn checks, founding team request log, meeting manager.
Polish	Exports, reminders/overdue flags, audit history, mobile responsiveness, backup and handover.

9. Recommended Build Approach

- Build a small custom web app using a coding assistant and a familiar, maintainable stack selected by the developers.
- Use a simple relational database for structured trackers. Keep file storage in the approved Google Drive wherever possible.
- Use reusable forms, tables, filters, status chips, and dashboard cards to speed up development.
- Do not spend time building payroll, employee logins, performance scoring, biometric attendance, or a full document-storage platform.
- Before adding integrations, deliver a working local MVP with sample/demo records and get HR feedback.
- Keep source code in a Belvo-controlled repository and document setup, environment variables, deployment, backups, and admin access.

10. Acceptance Checklist

- Only authorized HR users can sign in.
- HR can create and update onboarding and offboarding records with checklists.
- HR can maintain leave and attendance registers and export them.
- HR can find employee document and NDA Drive links and update their statuses.
- HR can track website photo updates and LinkedIn profile checks.
- HR can log founding-team requests and track daily meeting agendas/action items.
- Dashboard shows pending and overdue work accurately.
- Sensitive records and links are not publicly accessible.
- Developers provide working source code, setup instructions, backup guidance, and a short handover.

11. Explicitly Out of Scope

- Employee login, employee dashboard, or employee self-service portal.
- Payroll processing, salary calculations, tax/statutory calculations, or bank/payment integrations.
- Biometric devices, GPS tracking, or automated employee surveillance.
- Replacing Google Drive or building a new cloud file-storage product.
- Automated LinkedIn scraping or automated account access.
- Full CRM, project management suite, or public website CMS.

12. Instructions to the Development Interns

Build for actual HR work, not for an imaginary large enterprise. Start with the HR dashboard and the core trackers. Keep the UI clean and fast. Use existing Drive folders instead of rebuilding storage. Share a working MVP early, collect HR feedback, and iterate. Do not add features outside this brief without confirming the requirement with the HR/founding

team.

Project owner: Belvo Ventures Group | Intended users: HR team only
